T-Share Tables

design 967 ARCH

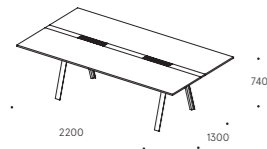

The product's simple aesthetic belies its construction and aggregation elements, which give it a flexibility of use that goes beyond the classic distinction between executive desk, work or meeting table. This evolution of the workbench should, rather, be interpreted in terms of modern work practices - think "smart working" or "co-working" - which require a versatility, accessibility and reconfigurability that up to now have had only marginal consideration. Aesthetically, the striking element is the central strip running end to end of the worktop, the real backbone of the system. This feature, made of sheet metal, gives the table great freedom of use. It can also be integrated later with top access sockets, wiring, lighting, screens, containers or shelves, ensuring perfect customisation for the intended use. Not a revolution, in an area whose potential has been thoroughly explored - just a reorganisation of form and aggregation for today's requirements, in an instantly recognisable product.

TECHNICAL DETAILS

Enormously versatile, the T-share system comprises a family of tables in various dimensions, with heights of 74cm and 105cm. The worktop is available in several finishes and widths. With depths of 80cm and 130cm it makes space sharing easy. Standard top in 16mm thick chipboard, with various surface finishes. The system structure and legs are in painted metal. The frame is concealed by sheet metal covers that create continuity between the top and the entire wiring system underneath. Along the centre runs a strip of bent sheet metal onto which different accessories can be fixed using magnets, thus creating different configurations of the system. In addition to magnetic accessories, there are single or double top-access power sockets. Electrical power runs along the under-table raceway, which is not only an attractive feature, but also contains all the technical accessories necessary for the system (power strips with power and data sockets).
